

## South Phoenix/Laveen Drainage Improvement Project Addendum

City of Phoenix

November 2012

# PUBLIC MEETING ANNOUNCEMENT

### Project Overview

For 53 years, the Flood Control District of Maricopa County has provided regional flood control services to protect county residents from flooding hazards. A flood control study is currently in progress in your neighborhood—the South Phoenix/Laveen Drainage Improvement Project Addendum.

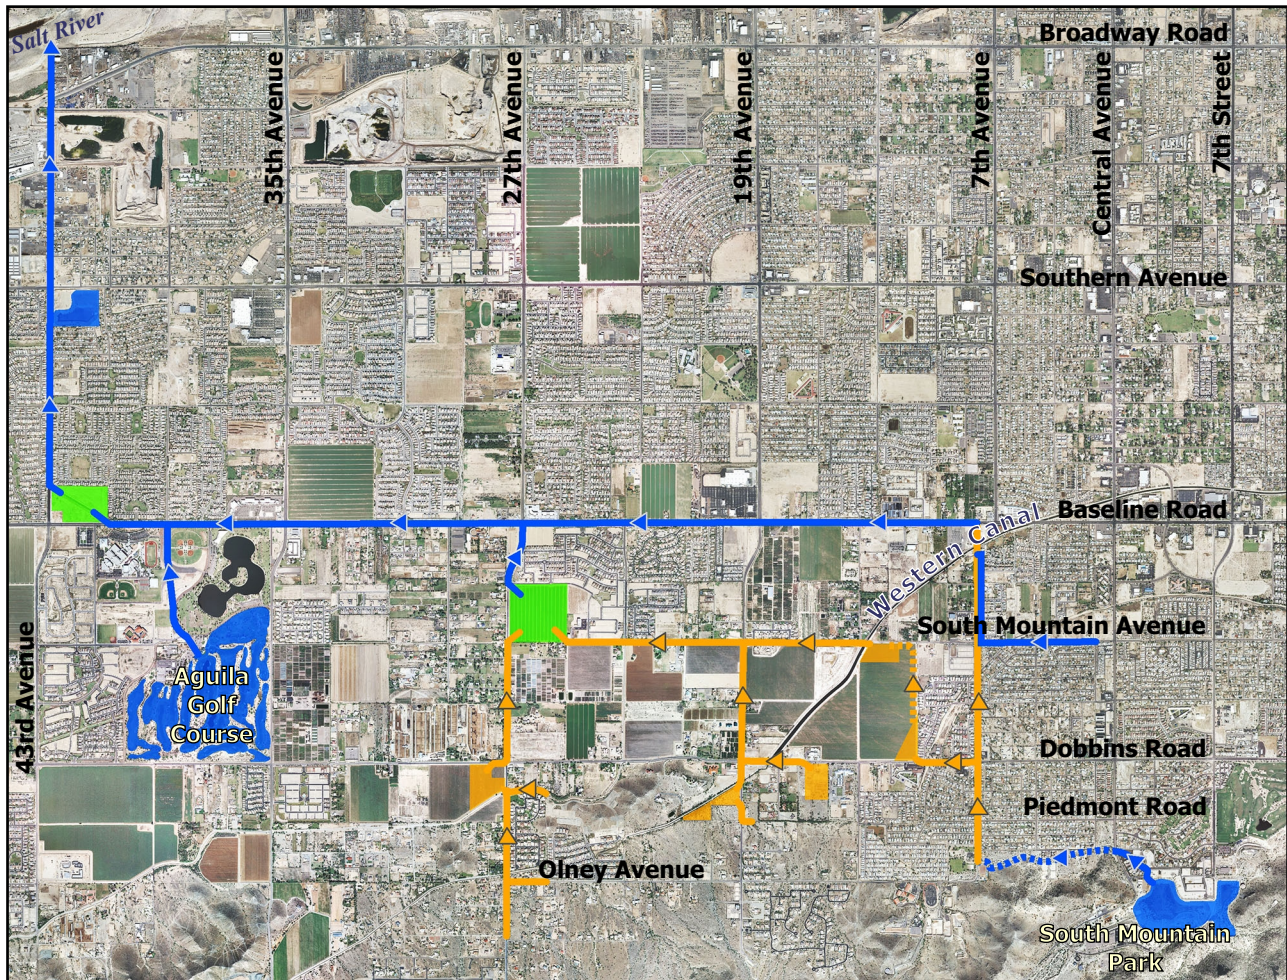

The South Phoenix/Laveen Drainage Improvement Project Addendum is an update to the District's 1997 South Phoenix/Laveen Drainage Improvement Project. This project identified flooding hazards in an area generally bounded by 43rd Avenue, 16th Street, South Mountain and the Salt River. The project produced a preliminary recommended plan to reduce those flooding hazards, including the design and construction of several stormwater detention basins and a storm drain system which carries stormwater to the Salt River. Some of the facilities identified in this recommended plan have already been constructed, such as a storm drain under Baseline Road between 7th Avenue and 43rd Avenue, a storm drain under 43rd Avenue between Baseline Road and the Salt River, and a detention basin at 43rd Avenue and Southern Avenue.

The map on page 2 shows the scope of the existing, designed and potential future flood control and stormwater drainage features identified in the South Phoenix/Laveen Drainage Improvement Project Addendum. You are encouraged to provide your input on the project to the District and City of Phoenix at the upcoming public meeting announced in this brochure.

### You Are Invited to a Public Meeting

Details of this project will be presented. You may provide input to project team members from the District, City of Phoenix, and consulting firms.
